

Building Sanitation and health maintenance

Protect your workforce or building occupants with our fast and economic out of hours sanitation process.

Whether your experiencing high threat levels from pandemic, unusual absenteeism levels or require outbreak control from legionella –meningitis type bugs we can provide very specialist sanitation services.

Using application and distribution methods developed for WMDs and bio terrorism we can apply a variety of chemicals or procedures which can eliminate reduce or control risk and hazard or infection from cross contamination.

Hard surfaces such as desks, doors and common areas are recognised as “Fomites” where pathogens can remain active or viable for up to 48 hours. Touch and hand to mouth-eye contact can result in cross contamination and the spread of disease.

Our service currently available only in the City of London and docklands area uses state of art chemicals and application techniques which means we can sanitise a work area almost as fast as we can walk through it.

Obviously this process will promote employee confidence booster and likely to reduce absenteeism too.

Pandemic and Outbreak Control Cost

We provide out of hours sanitation services although the biocides and virucides are potent they leave no harmful residue and the sanitised area is ready for occupation within the hour.

A minimum contract of 5 nightly visits over 4 weeks (20 visits) is required and a minimum charge of £200 per night levied.

Building Sanitation and health maintenance

This minimum charge covers the first 1000 square feet sanitised per night.
Thereafter the cost is 2p per square foot and £1 per door
All costs plus VAT

For all other Indoor Air Quality, sanitation and odour destruction requirements please contact us for more information and costs.
