

CBRN specific terrorism

This module looks at the risks posed from CBRN chemical biological radiological and nuclear events posed by terrorism and natural or accidental exposure. It shows hazard and risk together with defence measures. It provides an insight into contamination spread and control issues together with expected rational from emergency services.

It provides explanation of wind and dilution and plume effects and identifies specific problems with buildings, contamination, evacuation and decontamination issues generally.

Specific examples of contamination spread and cost issues coupled to liabilities are explained.
