

Module 3

Disaster Recovery

Written by Jeff Charlton 08700 789 999

This disaster recovery module identifies the importance of developing a separate “Disaster Recovery” response to the BCM module. It shows practical examples of disaster recovery, why it is a stand alone plan and why it is important to identify key people to initiate or invoke its use.

It shows the importance of RTO (*recovery time objectives*) tips on recovery and restoration and most importantly how best to use your initial time in triage assessments and responsive action.
