

## **Module 4**

## **Fire & Flood**

Written by Jeff Charlton 08700 789 999

This Fire & Water Damage training module provides the essential information required to prevent, or control and mitigate the effects of the most common physical disruptive events, fire & flood. It shows the importance of triage and the considerations of latent or secondary and often preventable damage. The module will show you how to control damage, what to look for and how to manage contractors in the restoration or recovery phase.
